

Starved and Exhausted in Pittsfield MA!

Sailplane pilots and space shuttle pilots are trained to execute normal landings without power. However, powered aircraft pilots normally have the option of a go-around, except, when they run out of fuel! Does this ever happen? In the past decade, more than 1,700 accidents have resulted from poor fuel management. At this exciting safety briefing we will examine a few fuel related accidents and discuss mitigation strategies that will prevent them from happening to YOU! Attendees are encouraged to bring any "there I was" stories to this seminar. Refreshments provided by South Mountain Flying Club. Click on the link below to register TODAY! See you there!

Directions: Mass Pike Exit 2, North on RT-7/20 to Dan Fox / Tamarack Rd.

A message from the National FAASTeam Manager

Invite a fellow pilot to the next WINGS Safety Seminar in your area.

Sign up for the FAA's safety services at www.FAASafety.gov!
